

UTECH 2018: LANXESS presents extensive range of additives

- **Flame retardant solutions for all types of polyurethanes**
- **Products for rigid and flexible foams as well as for CASE applications**

Cologne – The LANXESS Additives business unit will exhibit its premium products for the polyurethane industry at UTECH 2018 from May 29 to 31. The comprehensive product range includes flame retardants, plasticizers, crosslinking agents, catalysts and hydrolysis stabilizer for rigid and flexible foams, coatings, elastomers, sealants and adhesives.

As one of the leading manufacturers of bromine and phosphorus based flame retardants, LANXESS's Additives offers solutions for all types of polyurethanes.

The Levagard product range is particularly suitable for use in rigid polyurethane foam as well as in flexible polyurethane foam. The product range also includes new innovative flame retardant solutions for flexible foam addressing the trend towards lower emissions in the automotive industry.

The phosphate esters of the Disflamoll and Reofos range are suitable for a large number of polyurethane applications. They are effective flame retardants in rigid and flexible polyurethane foam applications as well as in coatings, adhesives and sealants. When used in CASE (coatings, adhesives, sealants and elastomers) applications, the Disflamoll and Reofos flame retardants combine plasticizing with flame retardant properties.

Last but not least, PHT4-Diol reactive flame retardants offer excellent flame retardant properties for all types of rigid polyurethane foam without impairing the mechanical foam properties.
